

WEEKLY INTERNSHIP ACTIVITY 9

Game vs Non-Game Examples

Games	Chess	PUBG	Candy Crush	Football	Minecraft
Non-Games	Calculator	Notepad	Weather App	Google Search	File Explorer

UX and UI Elements (Example: YouTube Website)

UX Elements (User Experience)	UI Elements (User Interface)
Easy navigation system	Play button
Search functionality	Like and dislike buttons
Video recommendations	Thumbnail images
Fast loading speed	Color scheme (red, white, black)
Responsive design	Typography (fonts used)
Clear user flow	Icons (home, subscribe, bell)
Watch history tracking	Video progress bar
Personalized suggestions	Menu layout
Error handling (video unavailable)	Comment section design
Accessibility features (captions, speed)	Channel profile images

Characteristics of a Game

A game can be defined as a structured type of play that includes rules, objectives, and interaction. It is designed to promote engagement, challenge, and often entertainment for the player. Unlike random activities, games have a specific system that governs how they are played and experienced.

One of the most important aspects of a game is the presence of rules. Rules specify which actions are allowed and what limitations exist within the game. They create structure and ensure fairness, providing a consistent experience for all players. For example, in chess, each piece has a defined way in which it can move, which forms the basis of the game.

Another essential aspect is the presence of goals. Every game offers an objective that the player aims to achieve, such as winning, earning points, or completing a task. Goals give direction and meaning to the player’s actions, making the activity significant rather than random.

Interaction is also a crucial element of games. Players actively participate with the system, whether by making choices, controlling characters, or responding to challenges. This interaction differentiates games from passive forms of entertainment like watching videos.

Furthermore, games often include feedback mechanisms such as scores, levels, or visual cues, which inform players about their progress. Challenges and increasing difficulty also play a role in maintaining interest and motivation.

In conclusion, games are defined by their structured rules, clear goals, and active interaction. These elements work together to create an engaging and meaningful experience, setting games apart from non-games.
