

WEEKLY INTERNSHIP ASSIGNMENT 9

Core Mechanics

1. **Movement System:** The player can move in four directions (up, down, left, right) within a bounded environment.
2. **Resource Collection:** Players gather items such as food or tools scattered across the map.
3. **Health System:** The player has a health bar that decreases over time or when encountering threats.
4. **Threat Avoidance:** Obstacles or enemies appear randomly, requiring the player to react and avoid them.
5. **Scoring System:** Points are earned based on survival time and resources collected.
6. **Progression Mechanic:** Difficulty increases gradually by introducing more threats or reducing resources.

Connection Between Mechanics and Player Experience

- Movement creates a sense of control and freedom
- Resource collection adds purpose and decision-making
- Health system introduces tension and urgency
- Threats create challenge and engagement
- Scoring provides motivation and measurable progress
- Progression maintains long-term interest

These mechanics work together to create a balanced loop of exploration, risk, and reward.

Gameplay Balance Considerations

- Resource availability should not be too high or too scarce
- Threat frequency should increase gradually
- Health reduction should feel challenging but fair
- Scoring should reward both skill and strategy

Gameplay Flow (Interaction Flow)
