Diploma in UX Design

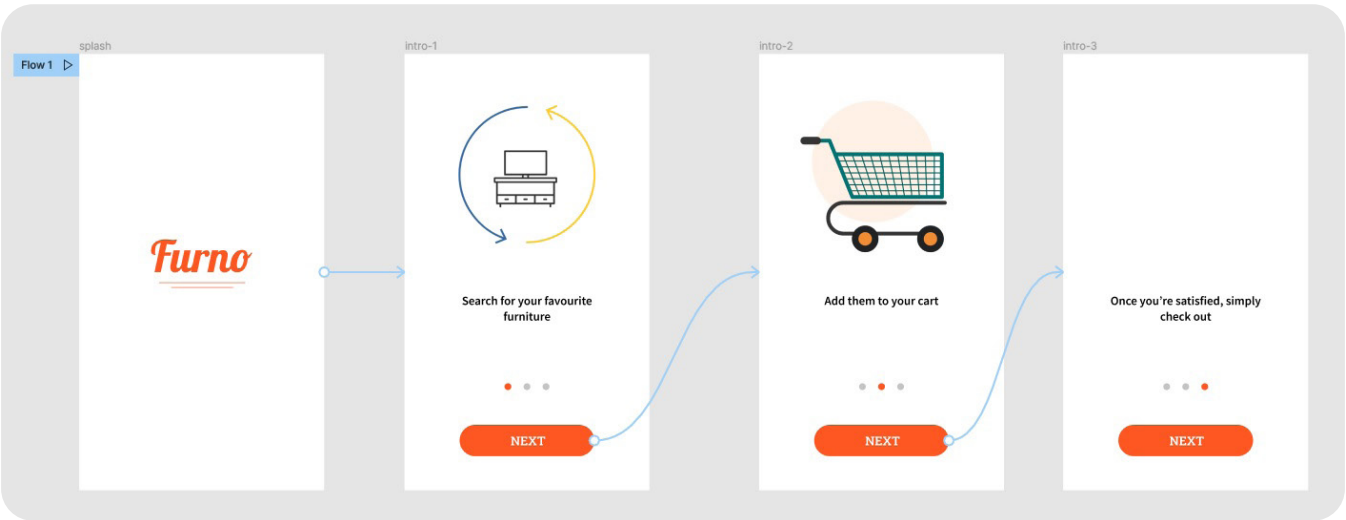
E-commerce prototype: Introduction screens

Summary Notes

Lesson objectives

By the end of this lesson, you should be able to:

- **Create introduction screens**
- **Add animations**
- **Work with plugins**

Figma demo


In the following prototype we've created an initial splash screen with the Furno logo. Given that the concept of this prototype is based on an e-commerce application, a slider was included demonstrating a few simple steps of how to go about making a purchase. To further enhance the UX of the slider, animations were used from the LottieFiles repository which can be installed as a plugin within Figma's development environment.
