

INTERNSHIP WRITE-UP

ABOUT THE ORGANIZATION

Edutainer is a leading provider of online courses, career development programs, and virtual internships for students and professionals. The organization focuses on technical training, portfolio development, and skills such as UI/UX Design, Python, and Data Structures.

OBJECTIVES OF THE INTERNSHIP

- Build a strong foundation in computer science concepts.
- Learn UI/UX Design principles and user-centered thinking.
- Analyze game systems and user engagement strategies.
- Develop skills in structured documentation and GitHub management.

LEARNING EXPERIENCES

- Followed a structured learning process:
 - Concept Understanding → Logical Breakdown → Application → Documentation
- Used tools like **Figma**, **Canva**, **Napkin** and **GitHub**.
- Utilized AI tools for transcription and content refinement.
- Conducted a case study on Stone Story RPG to understand game mechanics and implicit learning systems.

LEARNING OUTCOMES

- Improved analytical and problem-solving skills.
- Gained proficiency in UX/UI Design concepts.
- Learned organized workflow and repository management using GitHub.
- Enhanced technical communication through structured reports and presentations.

CONCLUSION

The internship at Edutainer provided practical exposure to UX Design, Game Design, and technical documentation. It helped bridge the gap between theoretical learning and real-world application while building a strong foundation for future growth in interactive technologies and design.

INTERNSHIP DOCUMENTATION ARCHIVE

This archive contains the documented work, notes, assignments, quizzes, resources, and supporting materials created during my UX Design and Game Design internship journey.

The purpose of this repository is to maintain organized learning records, preserve workflows, and structure the internship content in an accessible and traceable manner.

MAIN REPOSITORY

[UX & Game Internship Repository](#)

- Central repository containing internship chapters, assignments, notes, resources, and documentation.

INTERNSHIP QUIZ COLLECTION

[Interactive Internship Quiz Portal](#)

- Contains interactive quiz questions and quiz-related resources created during the internship period.

INTERNSHIP REPOSITORY STRUCTURE

The internship was organized into multiple chapters covering technical understanding, UX principles, and game design concepts.

Each chapter generally follows:

- Concept Learning, Notes & Understanding, Weekly Activities, Assignments, Documentation

Assignments are divided into:

- A01, A02, A03, A04 so on..

Each assignment section contain:

- Project Guidelines, Activities, Assignment Work

[CHAPTER 1 – CS FUNDAMENTALS](#)

Focused on computer science fundamentals and logical understanding required for design and technical workflows.

[CHAPTER 2 – UX DESIGN](#)

Focused on usability, interface understanding, user-centered thinking, and design-related workflows.

CHAPTER 3 – GAME DESIGN

Focused on gameplay systems, interaction design, mechanics, and design analysis.

Unlike the previous chapters, this section focuses more on interpretation, system understanding, and practical observations.

ASSETS & SUPPORTING DOCUMENTATION

Assets Folder Contains:

- Review PDFs, Resource connection explanations (i.e current pdf)
- **LaTeX Report Files:** Source files used to create the internship report documentation.
- Additional materials

BONUS SECTION – DATA ANALYTICS

Data Analytics Internship Repository

- A separate repository was maintained for data analytics work and unrelated internship studies, which were included as an additional chapter.

DOCUMENTATION APPROACH

This archive was created not only to complete internship tasks, but also to maintain:

- structured documentation
- organized learning resources
- assignment tracking
- preserved references
- accessible notes and workflows

The focus was on **clarity, organization, and long-term maintainability**.

TOOLS & AI USED

The AI tools used during this internship were treated as supportive assistants rather than replacements for independent thinking.

Main Software Used:

- Canva
- GitHub

These tools were primarily used for organization, documentation, formatting, version control, and archival.

AI Assistance:

- **Google Gemini**
 - Mainly used for helping structure quiz-related JSON systems.
- **OpenAI - ChatGPT**
 - Used for research perspectives, brainstorming, refinement, and assignment support.

Additional Context: During this period, I was **balancing two internships** simultaneously due to unforeseen circumstances. This internship became the **primary documented project** because **digital workflows, assignments, and resources are easier to organize** and archive properly compared to the offline internship work.

RESOURCE & CONTENT NOTE

Internship-provided videos were intentionally not redistributed to avoid possible ownership or institutional concerns.

The archive instead focuses on: notes, assignments, documentation, reflections, publicly reproducible work

ADDITIONAL RECOMMENDATION COLLECTIONS

[Recommendation Collection Folder](#)

Alongside internship documentation, I also maintained a small collection of **recommendation-based archives** containing books, games, films, and other media that influenced my **thinking, creativity, problem-solving approach, and personal interests** during this period.

These collections are not directly related to the internship curriculum, but they represent the **broader learning environment and interests** that existed alongside the technical work.

RECOMMENDED COLLECTIONS

SELF-DEVELOPMENT

- [Self-Mastery Books](#)
 - A collection of books related to discipline, thinking patterns, self-awareness, consistency, and long-term personal growth.

GAMES

- [Game Recommendations](#)
 - A curated list of my favorite games selected subjectively:

CONTENT WARNING

- [Underrated Disturbing Movies](#)
 - A collection of psychologically heavy or disturbing films intended for mature audiences.
 - Not recommended for sensitive viewers or individuals below 18 years of age.

RECOMMENDED COLLECTIONS

The games listed below are some of the titles that stood out to me due to their gameplay systems, design structure, progression mechanics, creativity, or overall experience.

Many of them influenced the way I think about:

- systems, interaction design, feedback loops, progression, optimization, experimentation, player engagement
- rather than simply entertainment alone.
