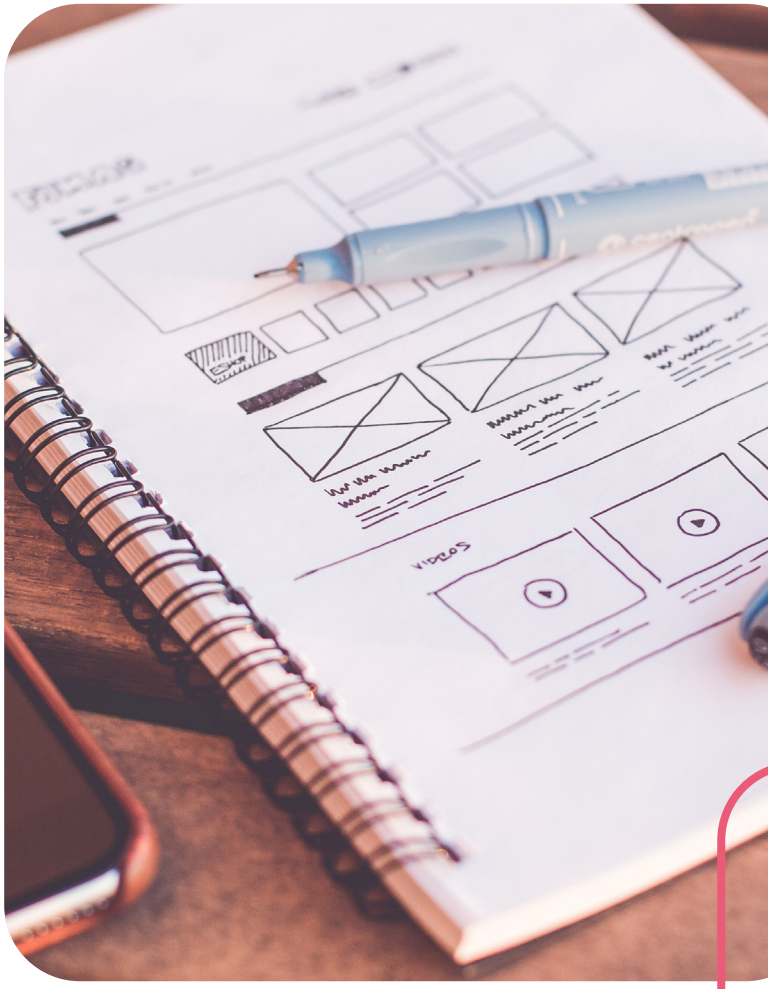
Diploma in UX Design

Prototyping: Finalising our app

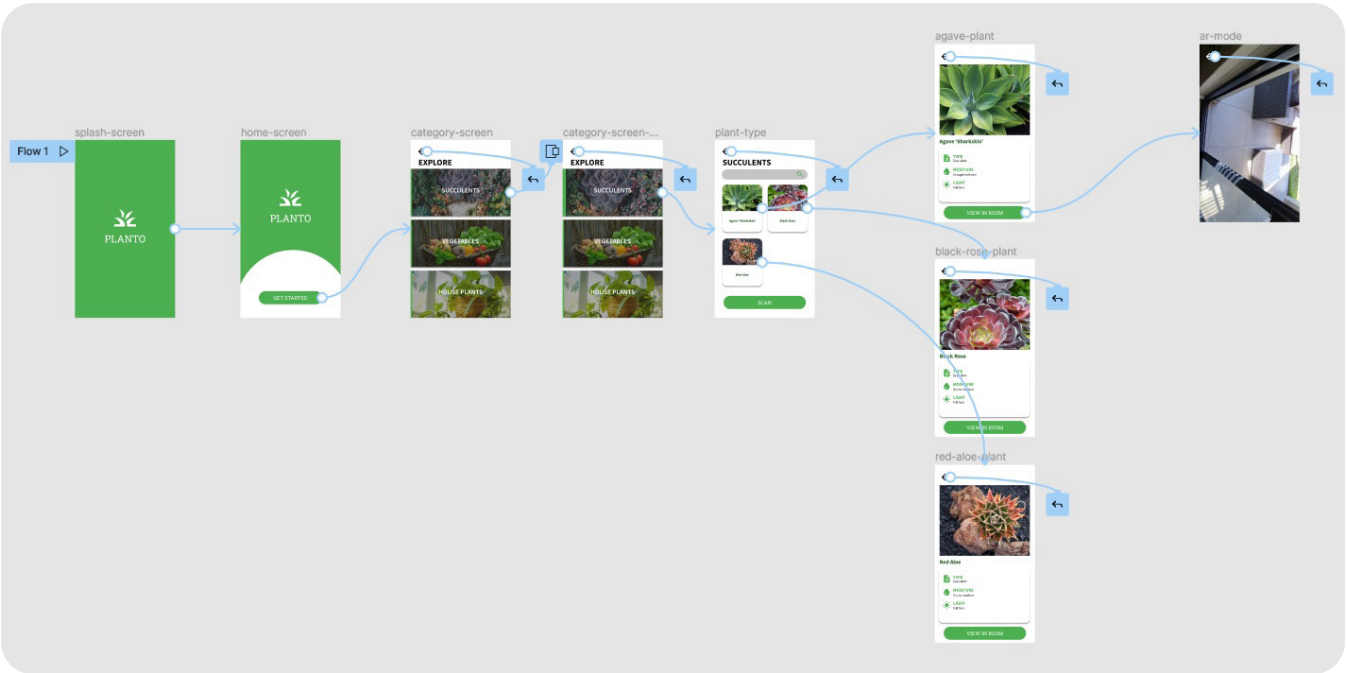
Summary Notes

Lesson objectives
By the end of this lesson, you should be able to:

- **Implement final user flows**
- **Add touch-ups to the user interface**
- **Conclude the prototype design**



Figma demo

In this lesson we wrap our Planto prototype with some core functionality that allows us to view the details of specific plant species depending on the card selected.


The details for these plants include plant type, required moisture and required sunlight. As a novel feature of the prototype we've added a feature that simulates the ability to project a model of the plant into the user's environment using augmented reality.
