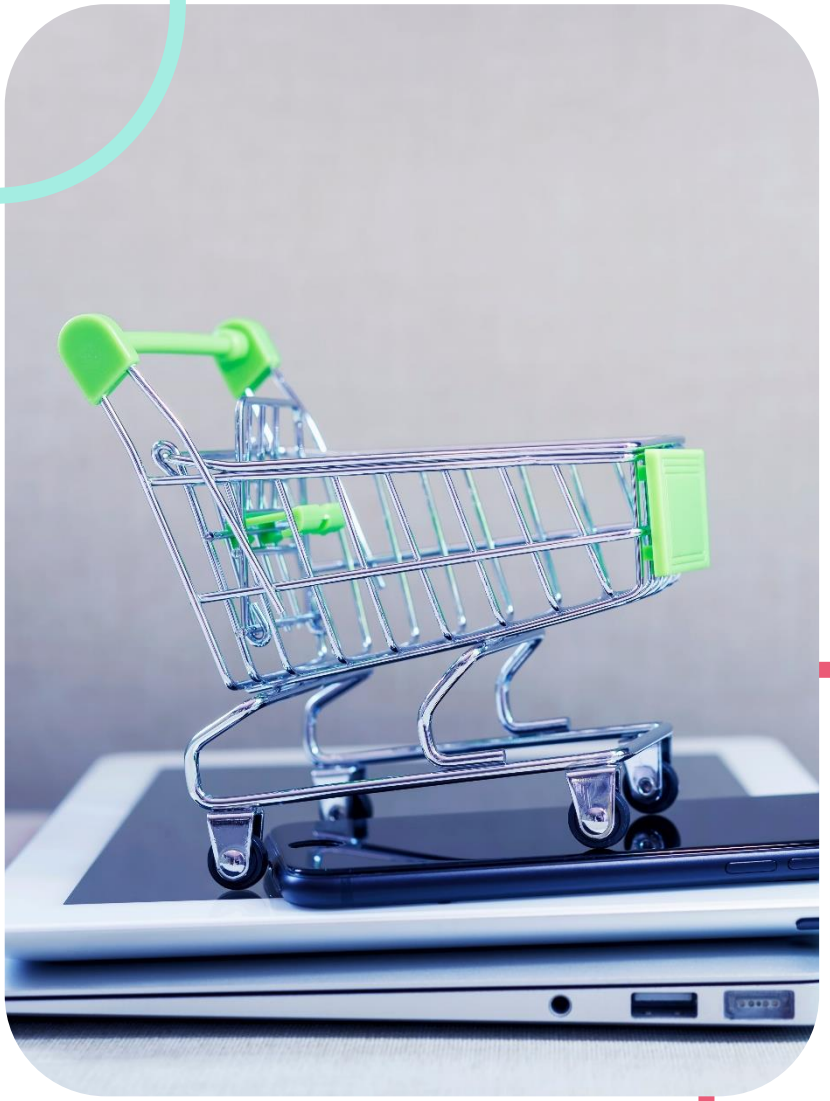
Diploma in

UX Design

E-commerce: a pleasant shopping experience



Objectives

- Getting users’ attention
- Explore the product range and shortlist the best options
- Review and select the most suitable product

Getting users' attention

Digital marketing & SEO

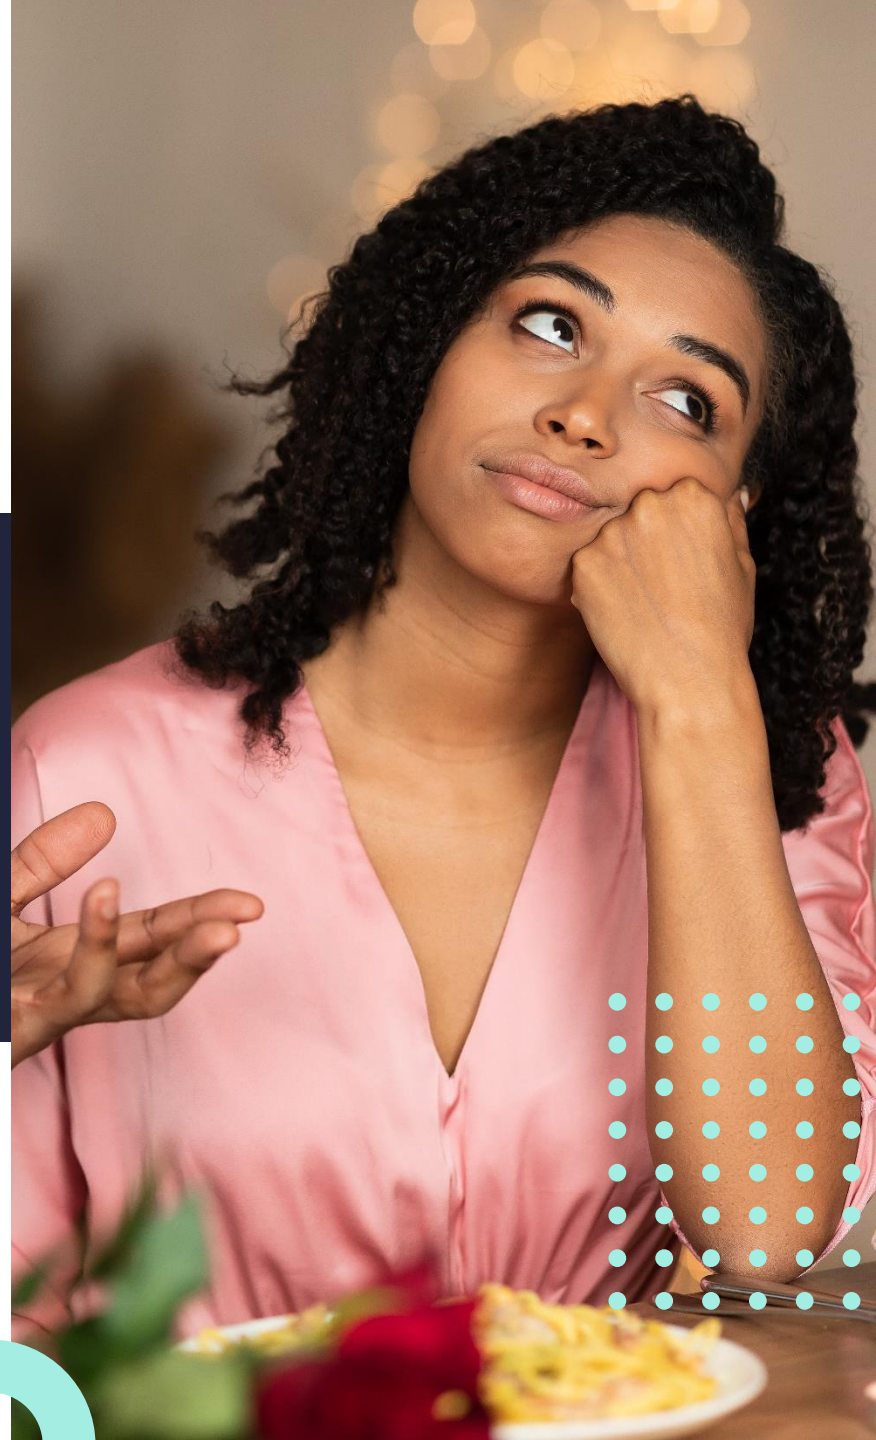
SEO – Search engine optimisation
Rank your e-commerce store and products as high as possible on search engines like Google

Digital marketing and SEO

- UX improvements affect SEO as well
- Good product description
- Helpful content and videos
- Fast download speed
- Clear and easy navigation

Great first impressions

Allow users to explore your shop and its offerings before committing to signing up
Allow for guest checkout
Don’t force to give credit card details



Great first impressions

- Provide a first-time purchase discount
- Professional & eye-catching design
- Quick and easy onboarding

Quality, trust & persuasiveness

E-commerce site must convey quality and trust
Products and services offered must be of the same quality

Quality, trust & persuasiveness

Product visualising tools are important

Create a physical presence through branded content (vehicles, warehouse)

Reasonable pricing & specials

Users expect lower prices for basic goods
Buying directly from a brand’s e-commerce store

Reasonable pricing & specials

- Luxury items can be priced higher
- Pay higher price due to convenience
- Promotions persuade & retain customers
- Loyalty programme to retain customers
- Be careful of bargain-hunters

Did you know?

Developers spend 50% of their time fixing issues that could have been avoided in the first place

Explore the product range and shortlist the best options

Wide supplier choice and product range

Wide supplier choice and product range

Use cross-selling to generate more income

Bundled and dispatched together

Stock of specialised and niche products

Variety of items motivate customers to buy

Peer-to-peer sales, auctions & 2nd hand goods

Peer-to-peer sales, auctions & 2nd hand goods

Combine new and 2nd hand goods

Attract price-sensitive customers

Willing to buy new goods to sell later on as 2nd hand

Discover & shortlist product possibilities

Discover & shortlist product possibilities

Search & filter needed for shortlisted items

Search-bar must be large as it is used by most

Provide suggestion lists below the search-bar

Intelligent search algorithm to accommodate for spelling mistakes

Discover & shortlist product possibilities

Auto complete functionality in search-bar

Search for variety of concepts (product, delivery)

Advanced search with filter

Have a search-bar and category listing

Search results lists & recommender systems

User-friendly search function

- Descending order of appropriateness
- Add filter to shorten search results
- Add sorting to sort results
- Support seamless infinite scroll
- Provide succinct item descriptions

If no infinite scroll:

- List the number of items per page
- After clicking ‘next’ go to top of page
- ‘next & previous’ should be at the top and bottom of page

Recommender system

Makes accurate & personalised product suggestions

It is an automated system displaying relevant products along with search results

It should make efficient recommendations

It can also be an online survey

Present a short list of a few appropriate products only

Mark products for later consideration (wishlist)

in the next lesson

Review & selection of the most suitable product

Product description & comparing

Product description & comparing

Price is normally the most important selection criteria and should be clearly visible

Luxury items don’t always have a price

If no price is listed, your customer will shop elsewhere

Common product features to list

- Size
- Capacity or weight
- Availability
- Colour options
- Brand
- Rating

Brand positioning

The way the product is positioned from the customer’s perspective

USP: Unique Selling Proposition

USP: What makes the product better and different from other options?

Brand positioning tips

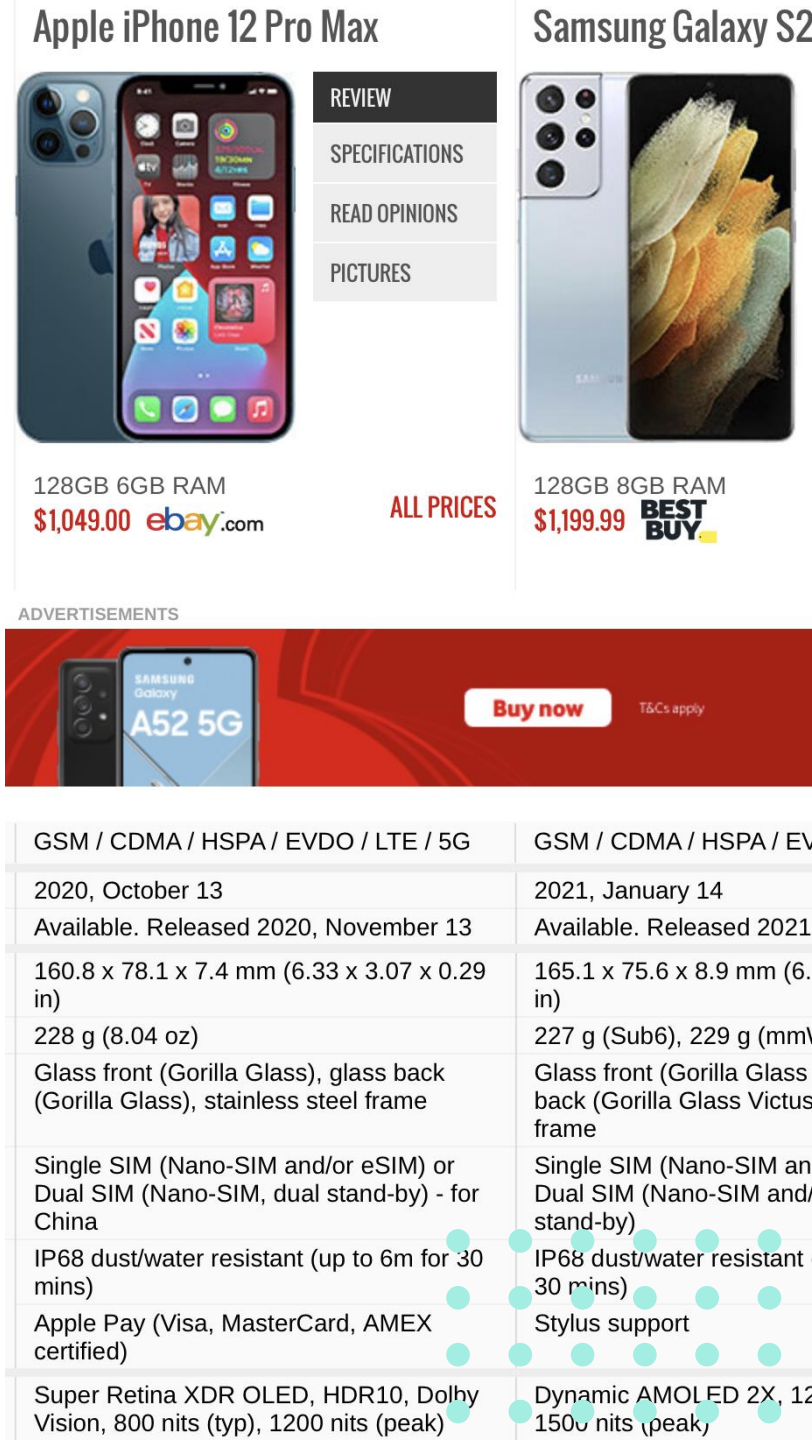
- Highlight the USP for easy comparison
- Clearly illustrate features and benefits
- Don’t oversimplify the product description

Brand positioning example

Comparison sites

Listing too little info will lose your customer to locate info somewhere else

Competitors knows this and uses this to their advantage



Brand positioning tips

- Highlight the USP for easy comparison
- Clearly illustrate features and benefits
- Don’t oversimplify the product description
- Avoid misalignment
- List features in a logical order

Brand positioning example

Misalignment of content

Vividly visualising the product

Vividly visualising the product

Users can’t touch or handle the product or service

Provide tools so user can experience & visualise the product

Professional pictures from various angles

Quality videos

Visualising the product example

Short video-like animation

Visualising the product example

Product illustration

Assist in how the product can address their needs

Can imagine how the product can be used

HS Fitness Weighted Sandbag 10kg

How do you create interesting visuals?

- Use angles from user’s perspective
- Consider angles from which other people will perceive the item if utilised by the user
- Product descriptions alone are not enough
- Comparisons, reviews, setup & use through visuals & articles

Product reviews

Product reviews

Other user reviews are credible

User reviews address real issues & concerns

Allows for quick and easy product selection

Some sites are opinion leaders

Upselling & cross-selling

Upselling & cross-selling

Upselling: upgrade or enhanced version of selected product

Cross-selling: complementary service or product

Don’t force the user to opt-in spending more

Dark UX patterns: unethical upselling or cross-selling

Usability is about people and how they understand and use things, not about technology

- Steve Krug
